

IT Health Check

Is your finger on the pulse of your IT Network?

Effective risk management is an insurance policy on the life of your business. A healthy IT network is reliant on secure, efficient IT infrastructure and regular maintenance. Untested risk leaves you vulnerable to security issues and costly downtime - potential threats that can undermine your business practices and profitability.

How can an IT Health Check help?

Huon IT offers IT Health Checks - a streamlined IT assessment that analyses and compiles a report on the strengths, weaknesses and opportunities within your existing IT systems.

IT Health Check is conducted by a Senior Huon IT Consultant and offers a complete view of your business needs by providing a comprehensive, practical and affordable review of your network design structure whilst adding value to your IT understanding. The IT Health Check report can form the basis for the development of a strategic IT Roadmap for your business.

What can IT Health Check assess?

- ▶ Current IT infrastructure
- ▶ IT Risk Management review
- ▶ Hardware adequacy for business needs
- ▶ Server performance
- ▶ Document Management Systems
- ▶ System Documentation
- ▶ Network Design
- ▶ Backup Strategies
- ▶ Virus Protection and Security Status
- ▶ Internet Connectivity

IT Health Check report provides you with comprehensive system documentation and a fitness evaluation of your business, clarifying both short and long term recommendations for your existing IT network. Common areas for review include virus protection strategies, backup management programs, upgrades or infrastructure purchases or network reorganisation - in fact, any area large or small which is collaboratively deemed essential to the continued successful management of your business.

Find out if your business is in good health today.
